

## A. Course Handout updated on 18<sup>th</sup> July, 2022

|                               |   |                |                           |
|-------------------------------|---|----------------|---------------------------|
| Institute/School/College Name | Chitkara University Institute of Engineering and Technology     |                |                           |
| Department Name               | Department of Computer Science & Engineering                    |                |                           |
| Programme Name                | Bachelor of Engineering (B.E.) - Computer Science & Engineering |                |                           |
| Course Name                   | System Design   | Session        | 2022-2023                 |
| Course Code                   | CS254H  | Semester/Batch | 5 <sup>th</sup> /CSE 2020 |
| L-T-P (Per Week)              | 2-0-0   | Course Credits | 02                        |
| Course Coordinator Name       | Er. Chaitanya Singla  |                |                           |

### 1. Scope and Objectives of the Course

The course provides a wide scope of learning & understanding of the subject. The main objectives of the course are to:

- Gives students hands-on experience with a project-based approach to systems analysis and design.
- Incorporates object-oriented concepts into traditional techniques.
- Progresses logically through each topic, presenting new material in a way that mirrors a professional analyst's workflow.
- Allows students to apply their own work to real-world examples, including running cases that serve as project templates for a hands-on learning experience.
- Highlights the considerations surrounding SAD concept application with stories of real companies' successes and failures.

### 2. Course Learning Outcomes

After completion of the course, students will be able to do the following:

- CLO01:** Distinguish concepts related to processes, threads, process scheduling, race conditions and critical sections.
- CLO02:** Examine and categorize various memory management techniques like caching, paging, segmentation, virtual memory, and thrashing; Design and implement file management system.
- CLO03:** Construct the SQL queries for given specifications.
- CLO04:** Explain the functions of the different layer of the OSI Protocol.

### CLO-PO mapping grid

| Course Learning Outcomes | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|--------------------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| CLO1                     | H   | H   | H   | H   |     |     |     |     | H   | M    | H    |      |
| CLO2                     | H   | H   | H   | H   |     |     |     |     | H   | M    | H    |      |
| CLO3                     | H   | H   | H   | H   |     |     |     |     | H   | M    | H    |      |
| CLO4                     | H   | H   | H   | H   |     |     |     |     | M   | M    | H    |      |

### 3. Recommended Books (Reference Books/Text Books)

- B01:** System Analysis and Design, 7<sup>th</sup> edition, Julie E Kendall and Kenneth E Kendal, 2009.
- B02:** Systems Analysis and Design, 9<sup>th</sup> edition, Gary Shelly, Harry J. Rosenblatt, 2011.
- B03:** System Analysis And Design, 5<sup>th</sup> edition, Wixom & Roth, 2012.
- B04:** Database System Concepts", 6<sup>th</sup> Edition by Abraham Silberschatz, Henry F. Korth, S. Sudarshan, McGraw-Hill, 2010.
- B05:** Data Communication and Networking, 4<sup>th</sup> Edition, Behrouz A. Forouzan, McGraw-Hill, 2007.

**B06:** Operating System Concepts Essentials, 9<sup>th</sup> Edition by Avi Silberschatz, Peter Galvin, Greg Gagne, Wiley Asia Student Edition, 2013.

**5. Recommended Tools and Platforms**

Coding Ninjas (online platform- <https://codingninjas.com/>)

**6. Course Plan:**

| Lecture Number                       | Topics  | Recommended Books |
|--------------------------------------|---|-------------------|
| 1-2                                  | Process Management, Process Control Blocks, Process States                              | B01, B06          |
| 3-4                                  | Process Control Block (PCB), Process Scheduling Queues                                  | B01, B06          |
| 5-6                                  | Schedulers, Threading, Memory management (types, fragmentation, paging, segmentation)   | B06               |
| 7-10                                 | Scheduling Algorithms pre-emptive and non-pre-emptive                                   | B06               |
| 11-12                                | Virtual memory, Demand Paging, page replacement algorithms                              | B06               |
| 13-14                                | Swapping, Thrashing   | B02, B06          |
| 15-16                                | File System( Types of file system, File system structure)                               | B04               |
| <b>ST-1 (Lecture 1- Lecture 16)</b>  |   |                   |
| 17-18                                | Allocation methods, directory implementation file system vs DBMS                        | B04               |
| 19-20                                | HLD (Decision Tables, Decision Trees, Flow Diagrams, Flow Charts, Data Dictionary), LLD | B04               |
| 21-22                                | Case Studies, Scaling(Vertical and Horizontal Scaling ) OSI Layers(physical layer)      | B05               |
| 23                                   | Data link layer, network layer  | B05               |
| 24                                   | Transport layer, session layer, presentation layer, application layer                   | B05               |
| 25                                   | IP addressing   | B05               |
| 26                                   | Types of IP address, Classes  | B05               |
| 27-28                                | SQL Commands, NoSQL(graph, Document, Column family) Practice Queries                    | B03,B04           |
| 29-30                                | Normalisation, Indexing Tabular vs Columnar Data  | B04               |
| <b>ST-2 (Lecture 17- Lecture 30)</b> |   |                   |

## 7. Delivery/Instructional Resources

| Lecture Number | Topics  | PPT (Link of ppts on the central server)  | Industry Expert Session (If yes: link of ppts on the central server) | Web References  | Audio-Video   |

## 8. Action plan for different types of learners:

| Slow Learners  | Average Learners  | Advanced Learners  |
|--|---|--|
| <ul style="list-style-type: none"> <li>Slow learners will be moved to some easy problems so that they master the concepts. Remedial classes have planned.</li> </ul> | <ul style="list-style-type: none"> <li>Some extra sessions can be planned for them to improve their performance.</li> </ul> | <ul style="list-style-type: none"> <li>These learners will be given additional projects so that they will get sufficient practical hands on experience.</li> </ul> |

## 9. Evaluation Scheme & Components:

| Evaluation Component | Type of Component                     | No. of Assessments | Weightage of Component |
|----------------------|---------------------------------------|--------------------|------------------------|
| Component 2          | Subjective Test/Sessional Tests (STs) | 02*                | 40%                    |
| Component 3          | End Term Examinations                 | 01                 | 60%                    |
| Total                |                                       | 100%               |                        |

\* Out of 02STs, the ERP system will automatically pick marks of the best 01 ST for final marks evaluation of STs.

## 10. Details of Evaluation Components:

| Evaluation Component | Description            | Syllabus Covered (%) | Timeline of Examination | Weightage (%) |
|----------------------|------------------------|----------------------|-------------------------|---------------|
| Component 02         | ST 01                  | Up to 40%            | 2 <sup>nd</sup> Week    | 40%           |
|                      | ST 02                  | 41% - 80%            | 3 <sup>rd</sup> Week    |               |
| Component 03         | End Term Examination** | 100%                 | 4 <sup>th</sup> Week    | 60%           |
| Total                |                        |                      |                         | 100%          |

\*\*As per Academic Guidelines minimum of 75% attendance is required to become eligible for appearing in the End Semester Examination

## 11. Syllabus of the Course:

| Lecture Number | Topics  | No. of Lectures | Weightage % |
|----------------|---|-----------------|-------------|
| 1-2            | Process Management, Process Control Blocks, Process States                              | 4               | 15%         |
| 3-4            | Process Control Block (PCB), Process Scheduling Queues                                  | 4               |             |
| 5-6            | Schedulers, Threading, Memory management (types, fragmentation, paging, segmentation)   | 4               | 35%         |
| 7-10           | Scheduling Algorithms pre-emptive and non-pre-emptive                                   | 8               |             |
| 11-12          | Virtual memory, Demand Paging, page replacement algorithms                              | 4               |             |
| 13-14          | Swapping, Thrashing   | 2               |             |
| 15-16          | File System( Types of file system, File system structure)                               | 4               |             |
| 17-18          | Allocation methods, directory implementation file system vs DBMS                        | 4               |             |
| 19-20          | HLD (Decision Tables, Decision Trees, Flow Diagrams, Flow Charts, Data Dictionary), LLD | 4               | 20%         |

|       |   |   |     |
|-------|---|---|-----|
| 21-22 | Case Studies, Scaling (Vertical and Horizontal Scaling) OSI Layers (physical layer) | 2 |     |
| 23    | Data link layer, network layer  | 3 |     |
| 24    | Transport layer, session layer, presentation layer, application layer               | 3 |     |
| 25    | IP addressing   | 2 | 30% |
| 26    | Types of IP address, Classes  | 4 |     |
| 27-28 | SQL Commands, NoSQL (graph, Document, Column family) Practice Queries               | 4 |     |
| 29-30 | Normalisation, Indexing Tabular vs Columnar Data                                    | 4 |     |
